

Oversized Elliptical Shaped Bearings

Three-point- contact Triple Lip Seal to have the best Sealing Performance

Cold Forged Spider and Case

Premium Material for excessive Load application

Universal joint consists of spider(cross) and 4 grease-filled roller bearings. It can transmit large torque at low friction. Spider with journal pegs and bearing cases as outer ring were hot forged or cold formed and machined.They are later carburized in furnace so that increased ruggedness and wear resistance are obtained.

NAQIN is a reliable manufacturer of premium quality cooling and engine drive systems, transmission parts, axle parts, driveline components, steering and suspension parts, and bearings. Being on the market for over 10 years, the company's products are available for both foreign and domestic applications, late and early models.
